

Vigneshwar S Balakrishnan

Technical Architect · Principal Information Systems Engineer

12+ years architecting high-scale full-stack solutions across fintech & enterprise — scalable distributed microservices, multi-tenant platforms, white-label products, and developer experiences that power millions of users.

12+ YEARS EXP. 5M+ LOANS GOVERNED 40+ MICROSERVICES MIGRATED

EXPERIENCE

Technical Architect · Principal Information Systems Engineer Rocket Companies (Formerly Mr. Cooper)

Jul 2018 – Present

Dallas, Texas, USA → Relocating to Chennai, India

Progressed through 5 levels: Software Engineer I → Software Engineer II → Senior Software Engineer → Lead Engineer → Principal Architect

- Architected zero-downtime cloud migration using Strangler Fig pattern — phased 40 interdependent microservices and on-prem DB servers to Azure/GCP, designing rollback safeguards, ADRs, and cross-team execution playbooks.
- Designed enterprise-scale OAuth 2.0 API Management gateway via Azure APIM and Apigee — reduced API latency by 80%, governed API security across 5M+ loans, and established org-wide authentication standards adopted across all platforms.
- Architected event-driven HELOC and Mortgage Payment solutions — implemented Outbox Pattern for guaranteed at-least-once delivery and Kafka-based event streaming pipelines for real-time payment processing at scale.
- Led Rocket Mortgage platform integration — API contracts, data mapping, and Saga pattern orchestration workflows to coordinate distributed transactions between two of the largest US mortgage platforms.
- Architected multi-brand white-label mortgage servicing platform on a shared multi-tenant architecture; delivered Forbearance, Payments, Digital Home Advisor, and One-Time Links as Technical Lead using CQRS and Circuit Breaker patterns.
- Defined reference architectures, led architecture review governance, and authored ADRs adopted across 5+ product teams — establishing engineering standards for microservices, event-driven systems, and cloud-native design.

React Node.js Spring Boot Apigee OAuth 2.0 Kafka Azure Kubernetes Docker GCP Outbox Pattern Saga Pattern CQRS
Strangler Fig

Analyst — Full Stack Engineer Verizon Data Services India

May 2017 – Jun 2018

Chennai, India

- Built the Integrations Operations Portal — a real-time network monitoring single pane of glass for network engineers, with interactive UI and live event scheduling via Socket.IO & RabbitMQ.

React Node.js Socket.IO RabbitMQ Express.js

Project Engineer — Full Stack Developer Wipro Digital

Bangalore, India

- Engineered a reusable React component library for Lloyds Banking Group (UK's largest banks); full-stack developer on Quizart, an internal BFSI LOB application.

ARCHITECTURE HIGHLIGHTS

Zero-Downtime Cloud Migration
Phased 40 interdependent microservices from on-prem to Azure/GCP using Strangler Fig pattern with rollback safeguards and ADRs.
40 microservices · Zero downtime · Full cloud adoption

Forbearance Application
Pandemic-era loan relief platform enabling homeowners to pause mortgage payments and enter modification workflows during COVID-19.
100K+ customers served

Event-Driven Payment Architecture
Designed HELOC and Mortgage payment pipelines using Outbox Pattern for guaranteed delivery and Kafka streaming for real-time processing.
Guaranteed delivery · Real-time payment processing at scale

OAuth APIM Gateway — Apigee
Designed enterprise OAuth 2.0 gateway via Azure APIM and Apigee, governing API security across the entire loan servicing ecosystem.
80% API latency reduction · 5M+ loans governed

Rocket Mortgage Integration
Architected Saga-pattern integration layer with API contracts and orchestration workflows across two of the largest US mortgage platforms.
Cross-platform integration at mortgage industry scale

White-Label Servicing Products
Multi-tenant mortgage servicing platform with CQRS and Circuit Breaker patterns enabling branded digital experiences for multiple partner servicers.
Multiple brand launches · Single multi-tenant platform

EDUCATION

Bachelor of Engineering — Electronics & Communications Sri Krishna College of Technology · Coimbatore, India

2010 – 2014
